

App-V Training: Mastering Application Virutalization (APPVCOMP, 4 jours)

Description

The course Mastering Application Virutalization (App-V Training) introduces you to App-V architecture & features. The training includes App-V installation & configuration, application sequencing, complex sequencing, security, application publishing, fault tolerance, scalability, load balancing & more. The course provides a detailed exploration of application virtualization with Microsoft App-V

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

An Introduction to Microsoft App-V

Server-Side: The Components

About Sequenced Application Components

App-V Client Components

Overview of App-V Deployment Models

The Client to Publication Relationship

Case Study: App-V in Action

Installation and Concepts

Preparing the Environment

Preparing the Full Infrastructure Model

Installing App-V Components: Sequencer, Client and Streaming Server

About App-V Modes: Streaming and Standalone

Automating the App-V Desktop Client Deployment

Testing the Installation

The Basics of Sequencing

Sequencing Overview

Sequencing Requirements

Sequencing Applications

Putting Sequencing in Action

Mastering Sequencing

About Complex Sequencing

About Applications that Require Complex Sequencing

Handling Sequence Exclusions

Implementing Workarounds

Working with Dynamic Suite Composition

About Upgrading an Existing Application

Working with Package Accelerators

Deploying Applications in Complex Environments

Overview of Deployment Options

HTTP Publishing and Streaming

Working in Standalone Mode

Working with SSL Communications

Working with Provide Policies

Scripting and App-V Command Lines

Overview of App-V Scripting Capabilities

App-V Scripting Basics

App-V Scripting Essentials

Working with App-V Scripting

Overview of App-V Command Line

App-V Command Line Basics

App-V Command Line Essentials

Working with App-V Command Line

Troubleshooting App-V

Overview of Troubleshooting Tools

Troubleshooting the Implementation

Troubleshooting Application Delivery

Troubleshooting Application Sequencing and Launching'

A Complete Troubleshooting Lab

App-V Scalability

Design Overview and Guidelines

Ensuring Fault Tolerance in the Design

Creating and Communicating the Design

Implementing Fault Tolerance in App-V

Implementing Network Load Balancing in App-V

Implementing Database Mirroring in App-V

Implementing DFS

Extending the Applications

Integrating App-V with the Virtual Desktop Infrastructure

About VDI

Integrating App-V with VDI

About VDI and the App-V Client Cache

About the Shared Cache

App-V and RDS Integration Alternatives
