

Cisco Training: A Comprehensive Introduction to Networking (CSCINT, 4 jours)

Description

The course A Comprehensive Introduction to Networking (Cisco Training) teaches how to build a network using Cisco equipment. The training includes configuration of key network services & protocols. The course also covers cabling, protocols, routing and ACLs amongst others. If you need to implement a Cisco network, this is the course for you.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Internetworking fundamentals

Exploring the Functions of Networking
Introduction to Securing the Network
Network Devices and Components
The Data Transmission Process
The Importance of Networking Models
Host-to-Host Communication Model
TCP/IP Internet Layer
TCP/IP Transport Layer
TCP and UDP
Understanding Ethernet
Connecting to an Ethernet LAN

Ethernet Standards and Cable Types

The Need for and Operation of CSMA/CD
Ethernet Types and Standards
Pins and Transmissions
Understanding Crosstalk
Exploring Cable Types
Ethernet Addressing

Ethernet Local Area Networks

Exploring the Functions of LANs
Understanding the Challenges of Shared LANs
Solving Network Challenges with Switched LAN Technology
Exploring the Packet Delivery Process
Operating Cisco IOS Software
Switch Fundamentals
Understanding Switch Security
Port Security Defaults, Options and Configuration
Maximizing the Benefits of Switching
Troubleshooting Switch Issues

Wireless Local Area Networks

Exploring Wireless Networking
Understanding WLAN Technologies
Overview of WLAN Security

Implementing a WLAN

Local Area Network Connections

Exploring the Functions of Routing

Understanding Binary Basics

IPv4 Addressing , Subnetting and IP Routing

Static, Dynamic, Classful and Classless Routing

Overview of Networking Protocols

Constructing a Network Addressing Scheme

Overview of a Cisco Router

Configuring a Cisco Router

Packet Delivery Process

Understanding of Router Security

Using a Cisco Router and Security Device Manager

Using a Cisco Router as a DHCP Server

Accessing Remote Devices and Remote Management

Wide area Networks

Understanding WAN Technologies

Enabling the Internet Connection

Enabling Static Routing

Configuring Serial Encapsulation

Enabling Routing Information Protocol (RIP)

Basic WAN Concepts

WAN Protocols and Connection Types

Overview of ARP, DNS and DHCP

Network Address Translation (NAT)

Introduction to Cisco Subinterfaces

Configuring Cisco Subinterfaces

Network Environment Management

Discovering Neighbors on the Network

Managing Router Startup and Configuration

Managing Cisco Devices

Medium-Sized Switched Network Construction

Implementing VLANs and Trunk

Improving Performance with Spanning Tree

Routing Between VLANs

Securing the Expanded Network

Troubleshooting Switched Network

Reviewing Routing Operations

Implementing VLSM

Simple Area OSPF Implementation

Implementing OSPF

Troubleshooting OSPF

EIGRP Implementation

Implementing EIGRP

Troubleshooting EIGRP

Access Control Lists (ACLs)

Configuring and Troubleshooting ACLs

Address Space Management

Scaling the Network with NAT and PAT

Transitioning to IPv6

LAN Extension into a WAN

Introduction to VPN Solutions

Establishing a Point-to-Point WAN Connection with PPP

Introducing IPv6

IPv6 Addressing

Planning an IPv6 Network

Implementing an IPv6 Network

Planning for and Implementing DHCP

Planning for and Implementing Name Resolution

About Security
