

Cisco Training: Troubleshooting & Diagnostics (CSCTS, 4 jours)

Description

The course Troubleshooting & Diagnostics (Cisco Training) focuses on troubleshooting in an enterprise Cisco environment. The training includes core networks (IPv4 and IPv6), switching, routing, network services, network applications, security and malware. This comprehensive troubleshooting course also discusses effective troubleshooting methods that will allow you to remain cool under fire when your corporate network is in trouble.

Plan de cours

Troubleshooting Skills and Methods

About Proactive versus Reactive Problem Management

Applying Concrete Troubleshooting Methods

Creating and Executing Support Procedures

Identifying the Symptoms

Categorizing the Incident/Problem

Prioritizing the Incident/Problem

Concrete Techniques for Identifying the Cause

Identifying and Testing the Solution

Applying the Changes

The Importance of Preventing Recurrence

The Art of Not Making things Worse

The Art of Zen in a War Zone

Maintenance and Troubleshooting with Essential Tools

Overview of Available Commands

Using the show command to Full Effect

Testing Network Connectivity Intelligently with ping and telnet

Collecting and Using Real-Time Information

Checking Hardware Function

Using Traffic Capture Tools : Wireshark and More

Using SNMP and Related Tools

Uisng NetFlow and other Related Tools

Enabling Event Notification

Troubleshooting the Basic Network

Overview of Relevant Concepts and Commands

Troubleshooting IPv4 Connectivity

Troubleshooting IPv6 Connectivity

Troubleshooting the Logical Network: Subnets and VLANs

Troubleshooting Layer 2 Switching

Troubleshooting Layer 3 Switching

Troubleshooting Spanning Tree Operations

Troubleshooting Routing

Overview of Relevant Concepts and Commands

Troubleshooting RIP and RIPng: Split Horizon and More

Troubleshooting EIGRP

Troubleshooting OSPF

Troubleshooting Route Redistribution

Troubleshooting BGP

Troubleshooting Network Services

Overview of Relevant Concepts and Commands

Troubleshooting Port Forwarding Issues

Troubleshooting NAT/PAT

Troubleshooting DNS

Troubleshooting DHCP\

Focus on IPv6 Coexistence

Troubleshooting Network Performance

Overview of Relevant Concepts and Commands

Diagnosing Network Performance Issues: Proposed Methodology

Troubleshooting Service Performance

Troubleshooting Switch Performance

Troubleshooting Router Performance

Troubleshooting Client Performance

Troubleshooting Converged Networks

Overview of Relevant Concepts and Commands

About Converged Network Elements

Troubleshooting Wireless Networks

Troubleshooting WLAN Connectivity Issues

Troubleshooting VOIP Implementations

Troubleshooting Video Issues

Troubleshooting Security

Overview of Relevant Concepts and Commands

Troubleshooting Firewalls and Public Facing Elements

Troubleshooting Cryptographic Components

Troubleshooting Remote Access Components
