

Oracle Training: SQL for Data Definition & Extraction (DBCAMP1, 4 jours)

Description

The course SQL for Data Definition & Extraction (Oracle Training) targets database management systems such as MySQL, Oracle, SQL Server, PostgreSQL. This course is designed to be a practical study into the management of a multi-platform database work environment. Though the focus will be on the Oracle platform, the content will be discussed in a platform generic way to allow practical application to SQL Server, MySQL and PostgreSQL environments. Part I of the course focusses on the essentials of the SQL language as it is applied to a variety of database platforms. This course will provide you with a comprehensive overview of the SQL language as it is defined by the ANSI standard.

Plan de cours

Relational Database Concepts

Exploring the Structure of a Relational Database

About Data and Metadata

The Principle of Integrity: Entity, Domain and Referential

Understanding Primary and Foreign Keys

About Keys and Indexes

SQL Architecture: How MySQL Interprets SQL Commands

SQL Architecture: How Oracle Interprets SQL Commands

SQL Architecture : How SQL Server Interprets SQL Commands

SQL Architecture : How PostgreSQL Interprets SQL Commands

The ANSI Standard and its Implementation in MySQL, Oracle, SQL Server and PostgreSQL

Creating Tables

The Need for Primary and Foreign Keys

Creating Tables for MySQL and Oracle

Adding Constraints to a Table

Inserting Data - Fundamentals

Retrieving Data - Fundamentals

Deleting Data - Fundamentals

Understanding Space Allocation

Retrieving Data

Retrieving Data from a Table

Sorting Data

Filtering Data : Using Simple Clauses

Filtering Data : Using Date and Time

Filtering Data : Working with Strings

Filtering Data : Using Logical Operators

The INSERT Statement

The UPDATE Statement

The DELETE Statement

Retrieving Metadata

The Importance of Metadata

Retrieving Metadata in MySQL

Retrieving Metadata in Oracle

Retrieving Metadata in SQL Server

Retrieving Metadata in PostgreSQL

Advanced Data Operations

Working with Aggregate Values

Retrieving from Multiple Tables - Inner Join

Retrieving from Multiple Tables - Outer Joins

About Sub-Queries

Correlated Sub-Queries

Indexing

Index Overview

SQL Server Index Architecture

Oracle Index Architecture

MySQL Index Architecture

PostgreSQL Index Architecture

About Indexes and Keys

Understanding Ordered and UnOrdered Indexes

Stored Procedures

Architectural Overview

Benefits of Stored Procedures

Creating Stored Procedures

Using Input and Output Parameters

Stored Procedures Optimization

Stored Procedures - Built-In Specifics

Using Oracle Built-in Stored Procedures for Administration Tasks

Using MySQL Server Built-in Stored Procedures for Administration Tasks

A Practical Administration Lab
