

Oracle Training: Database Administration A to Z (DBCOMP2, 4 jours)

Description

The course Database Administration A to Z (Oracle Training) targets database management systems such as MySQL, Oracle, SQL Server, PostgreSQL. This course is designed to be a practical study into the management of a multi-platform database work environment. Though the focus will be on the Oracle platform, the content will be discussed in a platform generic way to allow practical application to SQL Server, MySQL and PostgreSQL environments. Part II of the course focusses on the components of a production environment that allow database professionals to excel in their mission critical responsibilities.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Installation

Planning an Installation
Preparing the Environment
Performing and Verifying a MySQL Installation
Tuning a MySQL Server
Performing and Verifying an Oracle Installation
Tuning an Oracle Server
Performing and Verifying a SQL Server Installation
Tuning a SQL Server
Performing and Verifying a PostgreSQL Server Installation
Tuning a PostgreSQL Server
Putting It All Together

Relational Database Storage

The Principles of Data Storage
About Data Blocks and Their Impact on Performance and Design
Creating and Managing Database Files with MySQL
Creating and Managing Tablespaces with Oracle
Creating and Managing Tablespaces with PostgreSQL
Creating and Managing Database Files in SQL Server
Retrieving Space Allocation and Usage with the Various Platforms

Performance Optimization

Optimization Overview
Analyzing Queries for Oracle, MySQL, PostgreSQL and SQL Server
Gathering Practical and Strategic Data
Understanding the Importance of the Execution Plan: Actual vs Estimated
Optimizing for Data Retrieval
Optimizing for Insert, Update and Delete
Optimizing for Stored Procedures
Analyzing and Performing Bulk Operations
Analyzing and Optimizing Multi-Table Join Operations
Understanding Server Transactions and Locks

Dealing with Deadlocks and Livelocks

Backup and Recovery

Fault Tolerance vs Backup

Planning a Backup Strategy

Implementing a Backup Strategy for Oracle

Implementing a Backup Strategy for MySQL

Automating Backups

Recovering From Failure

Recovering System Databases

Implementing Fault Tolerance and High Availability

Essentials of High Availability and Fault Tolerance

About Clustering and Mirroring

MySQL Fault Tolerance Options

Oracle Fault Tolerance Options

SQL Server Fault Tolerance Options

PostgreSQL Server Fault Tolerance Options

Implementing a Fault Tolerance Strategy

Implementing Security

Security Management Overview

Planning and Implementing Security Management

Configuring the Server

Creating Logins

Creating Users

Granting Permissions: Grant, Deny and Revoke

Other Security Considerations

Monitoring Databases

Overview of Monitoring Tools

Planning to Monitor your Server

Implementing Alerts and Notifications

Using Performance Counters - Establishing a Baseline

Using Performance Counters - Analyzing Data

Profiling and Analyzing Queries

A Complete Lab for Database Administrators
