

Java Training: Mastering Eclipse & WebSphere (EBOOTCP, 4 jours)

Description

The course Mastering Eclipse & WebSphere (Java Training) discusses multi-tiered development with Java. Beginning with basic Java development and servlets, the course covers Java Server Pages, Tag Libraries and Filters. Further, you learn to implement Struts and EJBs. The course concludes with an overview of JMS messaging, ANT scripting & UNIT testing.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Java Architecture

Iterative Development

The Rational Unified Process

The Application Tiers: 1, 2 and 3-tiered applications

Distributed Applications: Technology and Infrastructure

Web Applications: Technology and Infrastructure.

The Java Answer

Packages and Files

JEE Architecture

Getting Started with MyEclipse

Introduction

Workspaces and Projects

Using Views and Perspectives

Writing Code in Eclipse

Creating Unit Tests

Debugging using Eclipse

Working with the Various Editors: XML, JSP, EJB and More

Reference

Documentation and Testing

Importance of Documentation

Common Everyday use of Javadoc

Making use JUnit for Testing Purposes

Creating Java Applications with MyEclipse

Creating the Java Project: Understanding the Available Templates

A Note on the Target Java Runtime and the Target Platform

Setting up Perspectives and Java Project Properties

Planning the Project Structure: Managing Packages and Classes

Defining the Application Structure: Presentation, Business and Data

Creating a Simple Desktop Application: Creating the Interface

Creating the Business Layer: Making use of Java Beans

Using External Resources: JNDI

A Few Useful Testing Tools

Preparing for Application Deployment

- Packaging and Deploying the Application
- Performing the Deployment and Verifying the Results

Java EE Web Programming

- Servlets
- The JSP Page
- Using Beans
- State Management
- Tag Libraries
- Creating a Simple Tag
- Using Tag Libraries
- Validation Tags
- Creating and Using Controls
- Servlet Filters

Struts Fundamentals

- JSP Model 1 and Model 2 Architecture
- Struts Startup
- Struts Architecture
- Creating a Struts Form
- The Action Form

Struts Essentials

- Using DynaActionForm
- Implementing the Action
- Using ActionForward
- Using Wildcards
- Adding a Message Bundle
- Configuring Exception Handling
- Using Struts Tag Libraries
- Using Struts Tags: A Complete Example

EJB Fundamentals

- EJB Fundamentals: Basic Structures
- Creating a Simple EJB
- The Deployment Descriptor
- EJB Deployment
- Creating an EJB Client

Session Beans

- Session Bean Basics
- Creating a Stateless Session Bean
- Creating a Stateful Session Bean

Entity Beans

- Entity Bean Fundamentals
- Creating a BMP Entity Bean
- CMP Entity Beans: The Mechanics
- Deploying a CMP Entity Bean

Advanced Entity Bean Concepts

- Understanding Database Relationships
- Implementing BMP Entity Bean Relationships
- Implementing CMP Entity Bean Relationships
- Using Local Interfaces
- Using Handles
- Using Environment Variables

- Implementing EJB Transactions
- Using Programmatic Transactions
- Declarative Transactions

Message Driven Beans

- About Message Driven Beans
- Creating a Message Driven Bean
- Creating the Bean Class
- Deploying a Message Driven Bean
- The Message Driven Bean Client: Point to Point
- The Message Driven Bean Client: Publisher-Subscriber

Introducing Ant

- Preparing and Understanding the Environment
- Creating Projects
- Creating Project Structures
- Creating an Ant Build File
- Executing a Build
- Understanding Program Structure
- Executing a Program
- Working with an IDE
- Mastering Ant from the Command Line

Ant Language Elements

- Datatypes and Properties
- Working with Paths
- Understanding and Working with Filesets
- Referencing Specific Elements`
- Advanced Datatypes
- Understanding and Working with Properties
- Controlling Ant with Properties
- About References and Library Dependencies
- The Ant Data Model

Packaging projects with Ant

- Working with Files
- Understanding and Working with Mappers
- Preparing a Package
- Understanding JAR, WAR and EAR Files
- Creating and Testing with JAR files
- Creating Zip files
- Packaging for Unix
- Working with Resources

Team Development

- Team Development Architecture
- Preparing for Team Development
- About the Repository and Code Synchronization
- Synchronizing Workspaces
- About Versioning and Version Control
- Working with Perforce and the Perforce Perspectivew
- Creating a Perforce Project
- Working with Code in a Team Environment
- Managing Code Changes
- Managing and Resolving Conflicts
