

Excel Training: Mastering Task Automation (EXCADV, 3 jours)

Description

The course Mastering Task Automation (Excel Training) provides business participants with the skills they need to automate almost any business task. Starting with a review of essential concepts in data analysis using Microsoft Excel, the course quickly proceeds to a complete and in depth study of macros and VBA development. The course covers every aspect of VBA development including the Excel object model, looping, functions, conditional logic and database access amongst others. If you need to use Microsoft Excel to automate your business tasks, this SETC certified course will teach you the skills you need. SETC Training - Formation SETC provides advanced Microsoft Excel training in Ottawa, Montreal, Toronto, Quebec and Calgary.

Tarifs

- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Working with Data

Creating the Reference Data

About Working with Data Types

Importing Data from Other Sources

Filtering and Sorting Data

Using Excel Functions and Worksheets to Build Summary Data Sheets

Using Advanced Functions

Creating Custom Functions

Working with Functions

Overview of Available Functions

Working with Logical Functions: And, Or, Not and More

Working with Conditional Functions: IF, AVERAGEIF and More

Working with Text Functions: FIND, LEN, TRIM and More

Working with Lookup Functions: LOOKUP, VLOOKUP and More

Other Useful Functions

Reviewing Macros

Reviewing Relative and Absolute References

Planning a Macro Recording

Understanding the Generated Code

Modifying the Generated Code

Creating a Custom Macro from Scratch

Debugging Macros and Code

Programming Essentials for Excel

Mastering Data Types and Variables

Mastering Conditional Logic

Mastering Looping and Repeating Structures

Working with Functions in Code

Understanding Function Parameters

Working with Objects in Excel

Object Fundamentals: Objects, Properties and Methods

About Working with Objects and Variables

Understanding Object Collections and Excel

Working with the Excel Object Model

Working with Workbooks in Code

Working with Worksheets in Code

Working with Cells in Code

About Referencing Cells

Component Programming

About COM and .NET: Interacting with Other Data Sources

Saving Data in a Database using Excel

Saving Data in a non-Excel File using Excel

Automating Word from Excel

If Time Permits – Building Data Forms

Automating Tasks

The Art of Task Automation in Excel: Why Anything can be Automated

Automating Data Retrieval, Import and Export Tasks

Automating Data Cleanup Tasks

Automating Formatting and Data Conversion Tasks

Automating Presentation Tasks: Graphs and Charts

Real World Automation: A Complete Lab
