

Excel Training: Data Analysis & Reporting (EXCPRO, 2 jours)

Description

The course Data Analysis & Reporting (Excel Training) teaches you to analyze & report on data using Microsoft Excel. The course covers data layout using multiple Excel worksheets and custom & advanced functions. The training includes Excel graphs, PivotTables and the use of custom functions, sorting & filtering to analyze & report on data.

Tarifs

- Tarification: \$1,500/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Microsoft Excel Essential Skills Revised

Identifying and Referencing Cells

Working with Cell Contents

Formatting Cells

Working with Formulas

Business Graphics

Exercise: Setting up the Business Data

Working with Data

Characteristics of a Database Layout

Using Cell Names to Prepare the Data

Using Filters to Sort and Filter the Data

Creating Custom Filters to Find the Data you need

Using Search and Find Functions to Locate the Data you need

Using Subtotals to Summarize the Data

Removing Duplicates

Using Custom Functions to Clean the Data

Exercise: Summarizing the Data with Excel Functions

Advanced Functions: Conditional Logic

Using Conditional Formatting

Planning for Conditional Logic

Using a Single If Function to Implement Conditional Logic

Using Multiple If Functions to Implement Complex Conditional Logic

Using the AND and OR Functions to Implement Complex Criteria

Using Negation and DeMorgan's Theorem to Simplify Logic

Exercise: Implementing Complex Logic in Support of Data Cleanup

Advanced Functions: Statistics and Finance

Review of Fundamentals: Working with Excel Functions

Dealing with Special Situations: Blank Cells

Working with Statistical Functions: Count, Median and Average

Working with Statistical Functions: Variance and Standard Error

Working with Statistical Functions: Frequency and Ranking

Working with Statistical Functions: Linear Regression and Correlation

Working with Statistical Functions: Probability Distributions

Performing Variance and Standard Error Calculations

Working with Financial Functions: Payments, Interest and more
Working with Financial Functions: NPV, IRR and More
Performing Financial Analysis: Probability and Earned Value
Exercise: Creating Statistical Summary Sheets for Corporate Data
Exercise: Analyzing NPV and IRR for Project Allocation

Pivot Tables

Setting up the Data
Creating a Pivot Table
Changing Row, Column and Data Associations
Formatting the Pivot Table Headers
Formatting the Pivot Table Aggregate Values
Setting Pivot Table Options
Adding and Working with Splitters
Exercise: Using Pivot Tables to Analyze and Present Data
