Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Introduction to HTML5 development for IOS

Overview of development for IOS

HTML5 vs native application

Pure HTML5 vs WebKit HTML5

Compatibility fallbacks

Online Documentation

Structuring the Application

Overview of an IOS application

The HTML page

CSS layout

Dealing with screen size, orientation and ratio

Handling automatic screen resize and rotation

Managing zoom and browser decorations

Controlling Webkit features

DOM Manipulation

Understanding DOM manipulation

The standard DOM API

DOM event overview

Using WebKit events

Managing Mobile Events

Understanding IOS events

Touch, multi-touch and gestures

Touch vs Click

Best practices

CSS3 and WebKit

CSS3 introduction

Finding Elements

The new CSS3 rules

WebKit extensions

Fallbacks

Animation

Understanding animations

JavaScript vs CSS animation

Using WebKit animations

- Using WebKit transformations

Google Closure Tools

- Understanding Google Closure

- Optimizing JavaScript code

- Verify JavaScript style

- Using the Closure JavaScript library

- Templating pages with Closure

- Closure CSS extensions

Backbone.js

- The need for Backbone.js

- Creating models

- Using the Backbone.js events

- Connecting models to the view

- Working with collections

- Communicating with the server

Node.js

- Understanding node.js

- Creating a simple HTTP server

- Responding to events

- Working with files and streams

- Deploying a node.js application

Calling Objective-C Code from JavaScript

- Understanding native code vs JavaScript

- Creating a sample Objective-C object

- Calling an Objective-C method from JavaScript

- Using the object from JavaScript

- Best practices

Debugging and Performance Tuning

- Tools of the trade

- Debugging an application

- Testing the performance

- Testing for compatibility

- Performance tuning
