

Java Training: The Complete JEE Course (JCOMP, 10 jours)

Description

The course The Complete JEE Course (Java Training) is a complete exploration of enterprise application development with Java. To start with, you learn about a variety of application servers (WebSphere, WebLogic, JBoss, etc.) and the foundations of JEE. Individual JEE modules are introduced in a natural, sequential fashion, starting with JNDI and moving up to MBeans. Exercises are provided along the way permitting the student to get hands-on experience with most facets of JEE. By the end of the course, the student will have had hands-on knowledge with JNDI, JTA, JMS, EJB (including MDB), JPA, JAAS, Servlet and JSP technology.

Tarifs

- Tarification: \$6,600/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Overview Of JEE

Java Platforms

Characteristics of Enterprise Computing

JEE Technologies

Multi-Tier Architectures

Advantages of Multi-Tier Architectures

Container-Based Approach

JEE Application Models

The Websphere Server

WebSphere Architecture

WebSphere JDBC Access

WebSphere JMS

WebSphere Security

WebSphere EJBs

WebSphere Servers and Clusters

WebSphere JNDI

Java Naming And Directory Interface

What is JNDI?

Benefits of JNDI

Naming and Directory Services

Using JNDI

Context Operations

JNDI Utility Class

JNDI Example

Naming Exceptions

Using JDBC Data Sources

Connection Pools

JDBC Data Sources

Data Source Example

Configuring JDBC Data Sources

About JTA

Enterprise Java Beans 3.0

Enterprise Java Beans Component Model

Parties Involved in EJB Deployment

EJB Server and EJB Container

Types of Enterprise Beans

EJB Wrapper Interfaces

Deployment Descriptors

Context Environment Objects

The Client Code

Deploying the EJB in WebSphere

Moving to Annotations

Session Beans

Session Bean Lifetime, Interface, and Lifecycles

Stateless Session Beans

Accessing Environment Entries

Stateful Session Beans

Managing Exceptions

Working with Cache Settings

Deploying and Running EJBs

Java Persistency Api

The Need for JPA

Designing for JPA

Creating POJOS

The Configuration File

Persisting POJOS in a Datastore

JPA and Relationships

About using JQL

More On JPA

Session Management

Managing Transactions

Thread Considerations

Addressing Performance Issues

A Complete JPA Example

Session Facade Pattern

JEE Design Patterns

Session Facade Pattern

Transactions

Container-Managed Transactions

Transaction Attributes

System vs. Application Exceptions

Rolling Back a Container-Managed Transaction

Creating an Enterprise Application

EJB Security

JEE Security

Adding Users in the Administration Console

Specifying Security for EJBs

Mapping Roles to Users

Java Message Service

Messaging Applications

JMS and the JEE Platform

- Basic JMS Concepts
- The JMS Programming Model
- Point-to-Point Messaging
- Publisher and Subscriber Messaging
- Reliable Message Delivery

Message-Driven Beans

- Message-Driven Beans
- Message-Driven Bean Example
- Deploying Message-Driven Beans
- Running the Example
- Message-Driven Bean Lifecycle
- Transactions
- Message Acknowledgement

Creating Servlets

- A Simple Servlet
- Web Applications
- Configuring Servlets
- Running the Servlet
- Servlets and Threads
- Cookies and Sessions
- Session Management

Custom Jsp Tags

- Using Custom Tags
- Types of Tags
- Defining Tags
- The tag Element
- Simple Tags
- Tags with Attributes
- Including the Tag Body
- Optionally Including the Body
- Including the Body Multiple Times

Servlet Filters

- What is a Filter?
- Sample Filter
- The Filter API
- Initializing Filters
- Blocking the Response
- Modifying the Response
- Running the Examples

Securing Web Applications

- JEE Security
- Users and Groups
- Authentication for Web Applications
- Authorizing Access in Web Applications

Design Concepts For Web Applications

- Architecture and Design
- Tiered Architectures
- Model-View-Controller Architecture
- JEE Design Patterns
- View Helper Pattern

- Front Controller Pattern
- Intercepting Filter Pattern

JavaServer Faces

- What is JavaServer Faces?
- Model 1 and Model 2 Architecture
- JSF Architecture and Components
- JSF and MVC: The Pieces of the Puzzle
- About the Configuration Files
- Building the Model
- Building the View
- About the Controller
- A Simple JSF Example

JSF Programming

- Common JSF Tags
- Validators and Converters
- Resource Bundles
- WebSphere Deployment

Xml Technologies

- Well Formed versus Valid XML
- XSD Schemas and Namespaces
- XPATH and XMLDOM
- XML and Web Services

Java API For XML JAXP

- Document Driven versus Event Driven Document Processing
- A look at SAX
- Exploring JAX
- The XML DOM
- Loading a Document
- Validating a Document
- A Complete Example

Java Architecture For XML Binding (JAXB)

- JAXB Overview
- Working with Schemas
- Schema Binding and the Java Representation
- Exploring Generated Classes and Interfaces
- Marshalling/Unmarshalling the Document
- Validating Data
- A Complete Example

Web Services

- The Need for SOA
- Web Service Technology: WSDL, SOAP, and UDDI
- Web Service Messaging: SOAP
- Java and WSDL
- Java and SOAP
- Using JAX-WS
- Creating a Web Service
- Creating a Web Service Client
- Controlling Names, Namespaces and URIs

More on Web Services

- Web Services and WebSphere Application Server

Web Service Events and Notifications

About Web Service Security

Advanced Web Services

Deploying Web Services

JMX Essentials

JMX Architecture

About Resource Management

Creating and Running an Agent

Using HTML Adapter

Using RMI Connector

Dealing with Exceptions

A Complete Example

MBeans

What is MBean?

The Standard Management Interface

MBean Inheritance Patterns

Standard MBeans

Using DynamicMBean and MBeanInfo

Handling MBean Errors
