

Java Training: Design Patterns, ORM, MVC & More (JEXP, 4 jours)

Description

The course Design Patterns, ORM, MVC & More (Java Training) teaches you how to build better Java application by making use of Java best practice & design patterns. An exploration of the class library is provided to help the developer change their thinking from writing code to developing solutions. Code reuse through powerful technology such as Hibernate, Struts & Spring MVC leads to flexibility in delivering complex Java software. At the end of this course, the developer will be better equipped to use existing technology, leading to higher quality code with reduced bugs.

- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Building Good Software

Overview

Characteristics of a Good Software Solution

How Good Software Is Built

Iterative Development

Requirements Management

Use of Component-Based Architectures

Ongoing Verification of Software Quality

Control of Software Changes

Uml Primer

Going From Analysis to Design

UML Class Notation

Generalization

Aggregations

Collection Classes

Sequence Diagrams

Statechart Diagrams

Activity Diagrams

Interfaces, Templates and Patterns

Inheritance and Polymorphism

Inheritance

Inheritance and Constructors

Polymorphism

Abstract Functions and Classes

Using Interfaces in Everyday Programming

Java Programming

Working with Reference Types

Exception Handling Overview

Exception Handling

Events

Using Generics

Creating Generics

Design Patterns

Overview of Target Class Structure

About Object Creation

About Object Structure

Refactoring Considerations

Abstract Factory

Singleton

Client Code Review

Bridge

Builder

Façade

Prototype

Adapter

Composite

Other Patterns

Refactoring Considerations

Advanced Development Technologies

About Enterprise Frameworks

Business Entity Frameworks

Validation Frameworks

Application Development in an Enterprise Framework

Making an Object Bindable

Configuration Based Programming

Data Access

Exception Handling

Logging

Validation

Hibernate Basics

Overview

The Problem with Hand-Coded Sql

About ORM with Hibernate

Hibernate Namespaces

Hibernate Interfaces

The ISessionFactory

The Session Instances

Identity

Hibernate Application Configuration

Object Mapping

Overview

The Domain Model

Mapping Basics

Mapping Objects

Dealing with Identity

Mapping Types

Mapping: Value Types and Entity Types

Mapping Class Hierarchies

Mapping Associations

Mapping Collections

Mapping and Polymorphism

Using Struts Based Frameworks

Model 1 and Model 2 Architecture

MVC for the Web

The Controller's Role

The Configuration File

Implementing the View

The Action
