Java Training: Enterprise Application Data Integration (JINTEG, 4 jours)

Description

The course Enterprise Application Data Integration (Java Training) introduces Java programmers to Enterprise Application Integration and B2B. Starting with the basic concepts, the course provides practical, hands-on training in XML, DTD & Schemas. The training includes writing Enterprise Java Connectors that bridge legacy systems with modern application servers. You also learn about key architecture & performance considerations. Tools to assist in building, debugging and deploying integrated application are covered.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Web Services Overview SOAP, WSDL and UDDI Web Services Architecture

Creating Web Services with Java

Creating Web Services with Stateless Session Beans

Tools and Utilities

Enterprise Application Integration **Process Overview** The Need for Enterprise Application Integration **B2B** Business Integration XML's Role XSL's Role XML Web Services **JEE Connectors Bridges** The Integration Server Document Definitions and Transformations **Application Integration Overview** Designing XML Schemas **Designing DTDs** Defining Data Transformations: XSL and XQuery Using XML Beans Using Message Format Language Flat File Transformations: CSV, EDIFACT, TSV, positional, etc Web Service Description Langage (WSDL) Server Specific XML Features XML Components Overview **Fast Parser XML** Registry **XPath Pattern Matching XML Editors**
