

Java Training: Distributed Messaging Applications with JMS (JJMS, 4 jours)

Description

The course Distributed Messaging Applications with JMS (Java Training) focusses on the Java Messaging Services API (JMS). The training includes an introduction to JMS before moving to hands-on usage of the Java messaging API. Ordering, filtering, fault-tolerance, transaction and security are covered in details. The course wraps up with an integration of JMS with business processes.

Plan de cours

JMS Essentials

The Need for High Availability

JMS Architecture

About JMS Integration with JEE Servers

Messaging Models

Connection Factories

Connections

Destinations

Session

Message Producers and Consumers

Messages

Distributed Messaging: A Typical Scenario

The BEA WebLogic JMS Provider

JMS Servers Features and Capabilities

Clustering

Connection Routing

Load Balancing

FailOver

Distributed Destinations

WebLogic JMS Configuration

Connection Factories

Templates

Destination Keys

Time to Deliver Extension

Persistent Stores

Other Configuration Options: Overrides, Quotas and Controls

JMS Application Design

Destination Types

Locating Destinations

Message Types

Dealing with Large Messages

Message Acknowledgements

Message Selectors

Message Expiration

Ordering and Filtering

Overview of Filtering

Filter Implementation in JMS

Overview of Ordering

Defining Message Delivery Order

Correlating Messages

Monitoring and Fault Tolerance

Subscriptions Defined

Implementing Durable Subscriptions

Persistence Defined

Implementing Persistence in JMS

Fault Tolerance: Message Re-Delivery and Poison Messages

Fault Tolerance: Guaranteed Delivery

Transactional Messages

Transaction Essentials

Architecture of JMS#39; Transactional Model

Why Use Transactional Messages

JMS Transaction Implementation

Optimal Transactions

JMS Security

Overview of JMS Security

JMS Security Architecture

Authentication

Authorization

Roles

Using Encryption: Java Encryption Extensions

Distributed Destinations

Clustering Overview

JMS Distributed Messaging Architecture

Building Bridges

Multicast Communications

Business Process Implementation

Business Processes

Overview of JMS Business Process Implementation

Designing a Business Process

Messages in a Business Process

Starting a Workflow

Consumer Interactions in a Workflow
