

# JavaScript Training: Mastering Objects and Advanced Techniques (JSADVAN, 5 jours)

---

## Description

The course Advanced Concepts (JavaScript Training) covers object-oriented programming with JavaScript and explores advanced techniques such as asynchronous calls, promises, workers and more. The training starts with advanced JavaScript concepts such as classes, inheritance, and polymorphism. You are taught about dynamic HTML using JavaScript and the DOM and the of JSON and Ajax for partial data loading. The course continues with a detailed discussion on the consumption of micro-services using asynchronous calls. The discussion starts with a look at the anatomy of asynchronous calls including events and event handlers. The use of callbacks for failure and success handling is explored in detail including the use of the XMLHttpRequest object and the use of promises. We also explore JavaScript workers while we delve into the proper implementation of all of these concepts using JavaScript objects and enterprise data patterns. This course teaches you to do just about anything you want with JavaScript

## Tarifs

- Tarification: \$3,350/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

## Plan de cours

### JavaScript Fundamentals Review

---

About JavaScript Inclusion in an HTML Page

About Scope and JavaScript

Creating JavaScript Functions

Declaring JavaScript Variables: var versus let

The Power of the Function Pointer

Manipulating HTML with JavaScript

### Creating Classes with JavaScript

---

Exploring the Many Forms of Functions

About the Relationship between Objects and Classes

About Prototypes and JavaScript Objects

Creating Classes with JavaScript

How to Declare Private Member Variables and Functions

implementing Object Properties

Understanding the Meaning of this and self

Writing a Constructor

Calling an Object from HTML

### Creating Subclasses with JavaScript

---

Exploring Generalizations and Inheritance

The Magical Polymorphism

The Meaning of this and self In A Subclass

Creating Subclasses and Calling Constructors

Calling Subclass Methods and Properties

How Everything Inherits from Object

Putting It All Together

### Managing Errors and Using Common JavaScript Objects

---

The Difference between Arrays and Dictionaries

Understanding Collection Classes: Arrays and Maps

Extending JavaScript Objects: Array and Map

The Magic of Iterable: Looping through a Collection

Adding and Removing Collection Items

Creating Custom Exception Objects

Creating A Custom Error Manager

Using Inheritance and Polymorphism to Generalize Error Collection

Organizing Code with Modules

---

The Need for Code Packages in JavaScript

Creating A Module in Vanilla JavaScript

The Many Forms of Export

The Many Forms of Import

About Modules and Scope

Exporting Functionality to HTML

Application Architecture and Invoking Remote Assets

---

The Anatomy of a JavaScript Web Call

What are Micro-Services and Why Are They Important?

Exploring JSON and the XMLHttpRequest Object

About Serializing Objects to JSON

Calling Web Assets Synchronously

Interacting with HTML

Making Asynchronous Calls

---

Understanding Events and Event Handlers

The Anatomy of an Asynchronous Call: Calls and Callbacks

Calling micro-services using XMLHttpRequest

Implementing Callback Functions for Success and Failure

Creating the Object Library to Store Results

Generating Dynamic HTML Content

Exploring Load Logic

Putting It All Together in the HTML

Using Promises

---

About Asynchronous Calls and the Promise Pattern

Creating a Promise with Success and Failure Callbacks

About Promise Chaining

About Promise Error Handling

Using Promises to Make Everything Asynchronous

Integrating Call Semantics through Objects

Using Workers

---

The Need for Worker Threads in JavaScript

Understanding the Architecture of Worker Communications

About postMessage and onMessage

Implementing the Worker: onMessage and postMessage

Implementing the Client: onMessage and postMessage

Starting the Worker, Getting Updates and Getting a Result

Handling Worker Errors

Making Asynchronous Calls with Workers

Making Authentication Calls and Cleaning up

---

Re-Factoring Duplicated Code

Cleaning up the HTML

Passing JSON Data to Micro-Services through Serialization

About Data Visibility in JSON Serialization

Exploring Interactions with Differing Platforms

Wrapping Things up!
