

HTML Training: HTML5 & JavaScript for Enterprise Applications (JSHTM5, 4 jours)

Description

The course HTML5 & JavaScript for Enterprise Applications (HTML Training) provides A to Z training on JavaScript & HTML5. The training starts with JavaScript fundamentals including variables, data types, control structures & functions. This is followed by advanced JavaScript concepts such as classes, inheritance, & polymorphism. You are taught about dynamic HTML using JavaScript & the DOM and the of JSON & Ajax for partial data loading. The course also covers HTML5 APIs including HTML5 Storage, the HTML5 File API, geolocation, and Asynchronous communication. Finally, you are taught about using HTML5 to provide rich graphics with SVG graphics & the canvas

- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Welcome to HTML5

The Need for HTML5

Migrating from HTML4 or XHTML

HTML5 Page

Semantic Structure

The Complete HTML5 Page

What's New

Global Attributes

Global Event Attributes

New Elements

The Address Tag

Rich HTML5 Forms

HTML5 Forms

The Form Element

The New Input Types

New Form Tags

CSS v3

CSS3

Borders

Gradient Fills

Shadow

Outline

Dealing with Different Browser Implementations

Web Fonts

CSS Transition

Media Queries

End of the Box Model War

HTML5 Accessibility

Accessible Tables

Creating Associations between Data Cells, Table Headers and Rowa

Accessible Forms

Delving Deeper

Understanding the Terminology

Resources

XML and DOM

Plugins

Audio and Video

Using Audio and Video Assets

About File Format

The Audio Element

The Video Element

Using the Track Element

JavaScript and the Web

Internet Technology Overview

Web Applications: Technology and Infrastructure

Client Side Technologies

The Role of JavaScript

Browser Support and the DOM

JavaScript Fundamentals

JavaScript Overview

JavaScript Programming Basics

JavaScript Data Types

Declaring and Using Variables

Arithmetic Operators

Logical Operators

Working with Strings

Debugging Tools

JavaScript Language Constructs

Conditional Constructs: if...else

Using Embedded if...else Statements

Conditional Constructs: switch()

Loop Constructs: for()

Loop Constructs: while()

Loop Constructs: do...while()

Functions

The Need for Functions

Declaring Functions

Working with Function Parameters

Using Functions

Creating a Function Library

Strings and Regular Expressions

The String Object

Coping with Data Entry Errors

Using the String Methods

Using Regular Expressions: RegExp

Working with JavaScript Classes and Objects

Proper Coding

Working with Objects: Declaration and Instantiation

Creating an Object

Accessing Object Properties

Using Object Methods

Using JavaScript's Classes

jQuery Fundamentals

Introducing jQuery

Getting Started

Referencing Elements

Manipulating the Page

Traversing the DOM

Advanced jQuery

Handling Events and Event Delegation

Ajax Using jQuery

Enhancing with Effects

jQuery Best Practices

Advanced JavaScript

JavaScript and Object Oriented Programming

The many way of Creating Objects

Understanding Objects and Prototypes

Object Functions and Context
