

Java Training: Implementing SOA using Java EE Technologies (JSOA, 4 jours)

Description

The course Implementing SOA using Java EE Technologies (Java Training) demystifies Java SOA architecture & implementation. The training starts with SOA fundamentals, terminology & implementation., The course includes an in-depth discussion on SOA analyzing & design. The various SOA technologies such as XML, Schemas & Web Service are covered. By the end of the training, you will understand how to design, implement & maintain an SOA solution using Java web services.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Service Oriented Architecture

What is SOA?

SOA Terminology: WSDL, UDDI, SOAP, BPEL, etc

What does an SOA solution look like?

SOA Advantages and Disadvantages

SOA Technology Overview

About Messaging Technologies

Distributed Applications: Technology and Infrastructure

Web Applications: Technology and Infrastructure.

Java Web Services: Technology and Architecture

Legacy Integration

SOA Security

The Need for Analysis

Analyzing Requirements

Functional versus non-Functional Requirements

Gathering Information

Functional Requirements: Identifying Actors and Use Cases

Using Decision Tables

Writing Fully Dressed Use Cases

Writing Use Case Diagrams

Writing Business Activity Diagrams

Elaborating a Domain and Service Model

Non-Functional Requirements: The Supplementary Specification

Change Management

Large Systems

Service Design

Translating Functional Requirements to a System Design

Designing the Web Service

Using Generalization and Aggregation

Creating a Design Class Diagram

Generating the Code

XML Fundamentals

Well Formed versus Valid XML Documents

XML Document Validation: DTDs and Schemas

Writing Effective Schemas

XSL Document Processing

Using XML in B2B Integration

About SOAP and WSDL

Creating Web Services

Web Service Architecture Revisited

About Data Types and Object Serialization

Creating the Web Service

Implementing Web Methods

Generating Web Service Artifacts: WSDL, Proxy Classes, etc..

Creating a Web Service Client

Securing Web Services

Optimizing Web Services

Applying Design Patterns

Business Integration with JEE

JEE Overview

Using Enterprise Java Beans

Creating Session Beans

Creating CMP and BMP Entity Beans

Creating Message Driven Beans

Exposing EJBs using Web Services

Security Considerations

The Road Ahead

WS Technology: What is Next?

The Drive towards Standards

Using ORM tools like Hibernate

Open Discussion on Possible Client Implementations
