## Java Training: XML Programming, Web Services, Beans & AJAX (JXML, 4 jours)

## **Description**

The course XML Programming, Web Services, Beans & AJAX (Java Training) is an exploration of XML programming with Java. The training starts with an overview of XML, AJAX & Java web development. With this in hand, the course covers advanced XML programming including DTD, Schemas, & Stylesheets. You are shown how to parse, validate & transform XML with Java using JAXP with SAX and DOM. By the end of the training, you will have developed a Java web application that makes use of XML, web services and AJAX.

## **Tarifs**

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

## Plan de cours

Eclipse, Java and XML

The JDK: Comparing Versions

**Exploring Eclipse** 

AJAX: The Architecture

Packages and Namespaces Defined

**Essential Classes for AJAX** 

**Essential Classes for XML** 

Creating a Web Site

XML Document Basics

How XML Works

Well Formed XML Documents

XML Comments Whitespace Usage

Using Prohibited Character Literal Entities

Well-Formed XML Summary

XMLDOM XPath

XML Document Validation: Schemas

Purpose Design of XML Schemas

Schema Document Basics

Schema Namespaces

**XSD Schemas** 

Schema Data Types: Simple Complex

**Using Element Groups** 

**Attribute Groups** 

**Creating Custom Data Types** 

**Schema Comments** 

**Importing Schemas** 

Linking the XML Document to a Schema

XSL Stylesheets

**XSL Stylesheet Basics** 

Stylesheet Output/Format

**XSL** Templates

Linking XML Documents to XSL Stylesheets

Using XSL to Transform XML to HTML XSL Variables **XSL Parameters XSL Conditional Elements** XSL Loops Other Useful XSL Elements **Creating Document Elements Attributes** New Features in XSLT 2.0 XML Programming in Java JAX versus SAX: **About Serialization** Serialization Behaviour **Creating XML Documents** Validating XML Documents **XML** Beans Advanced XML Beans Web Services Web Services Technologies Web Services: The Messaging Lifecycle Creating a Web Service Creating a Web Service Client **About Security and Profiles** Web Services and Classes AJAX Fundamentals Overview Writing an Pure Ajax Application AJAX Overview for Java Java's AJAX Capabilities Overview of AJAX Development in Eclipse Debugging and Tracing AJAX Applications **Globalizing AJAX Applications** AJAX Library Why Create Custom Scripts **AJAX Library Overview** Using Extensions to Java Script **Client Script Integration Embedding JavaScript** Embedding Resources for use with Java Script Web Services and Web 2.0 Overview of Web Service Integration Using Web Services in AJAX **Exposing Web Services to Script** Calling Web Services from Script AJAX : An Advanced Example Setting the Stage: The Business Problem Architecting the Solution Creating the Services Creating the Interface Creating the Scripts Putting it All Together

Securing the Services

Monitoring and Tuning the Application
