

# Azure DevOps Training: Implementing Azure DevOps Server (NFTFS, 4 jours)

---

## Description

Team Foundation Server is a fully integrated management tool for application development. Microsoft Team Foundation Server allows code development organizations to store their code in a version control database while managing every aspect of their application development projects from requirements to bug tracking to work item tracking to reporting. In its full expression, Microsoft Team Foundation Server provides full support for iterative software development activities. The course Implementing Microsoft Team Foundation Server (TFS Training) provides participants with a comprehensive overview of the Team Foundation Server environment including creating projects, managing Git repositories, managing branches as well as planning and implementing daily builds & deployments.

## Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

## Plan de cours

### Best Practices of Software Engineering

---

What is a Good System?

Characteristics of Good Software Solutions

Iterative Development

Requirements Management

Ongoing Verification of Software Quality

Use of Component-Based Architectures

Control of Software Changes

Symptoms and Causes of Problems

### Installation and Configuration

---

Requirements

The Installation Process in a Nutshell

Install Windows Server

Configure Windows Server IIS Services

Install the Microsoft .NET Framework

Enable ASP.NET

Create user or domain accounts

Install/Configure SQL Server

Confirm SQL Server Services

Install Azure DevOps

Install Team Build on the Azure DevOps Server

Client Configuration

### VSTS Azure DevOps

---

Visual Studio Team System Overview

Azure DevOps Overview

Azure DevOps Physical Structure

Azure DevOps Security Architecture

### Advanced Security and Customization

---

Azure DevOps Security Concepts

Team Foundation Security for Users and Groups

Viewing Azure DevOps User/Group Permissions

Changing Azure DevOps User/Group Permissions  
Managing Teams through Azure DevOps Customization  
Using Azure DevOps with SSL

## Exploring Requirements

---

Systems Analysis  
Design Perspectives  
Functional and Non-Functional Requirements  
Use Cases and the Analysis Process  
Use Cases in the Software Development Process  
Use Cases and Requirements

## Iterative and Agile Software Development

---

Overview  
The Unified Process  
Agile Software Development

## Setting Up the Azure DevOps Environment

---

Hardware and Software Planning  
Azure DevOps and Visual Studio Licensing  
SQL Server 2016 with Reporting Services  
Windows Server Azure DevOps Accounts  
Azure DevOps Installation Overview  
Azure DevOps Database Backup/Recovery Planning

## Azure DevOps and SharePoint

---

Overview  
Team Project Document Management

## Process Overview

---

Overview  
Creating Team Projects  
Version Control  
Work Items  
Work Item Tracking  
Build Management  
Testing  
Project Management  
Project Reporting and Metrics

## Team Projects

---

Team Projects  
Team Project Artefacts  
Azure DevOps Security Accounts  
Creating a New Team Project using a Process  
Deleting Team Projects  
Creating a Team Project-Specific Group  
Granting Access to Team Project Services

## Planning and Deploying Team Structure/Process

---

Strategies for Employing Team Projects  
Providing Substructure within a Team Project  
Team Projects and Solution/Process Frameworks  
Team Projects Physical Definition  
Agile Development and CMMI Process Improvement Templates  
Team Project Work Items/Work Item Types  
Customizing Process Templates

Azure DevOps Template Customisation and Tools

## Source Code Control

---

Azure DevOps vs. Visual SourceSafe

Structuring Team Projects for Version Control

Deciding What to Put into Version Control

Establishing the Initial Baseline for Your Project

Team Foundation Version Control

Managing Change and Sharing Information

Creating a Code Branch

Policing/Protecting Projects

## Using Team Foundation Build

---

Software Construction and Building Overview

Making a Build Validation Test

Setting Team Build Permissions

Creating Team Build Definitions

Queuing and Running a Build Definition

Scheduling a Command-Line Daily Build

Integration Build

Deleting Build Products

## Data Reporting

---

Azure DevOps Reporting

Work Item Tracking

Using Team Project Data Reports

Viewing Built-In Team Project Reports

Microsoft Excel Data Reporting/Integration

Accessing Data in the Azure DevOps Relational Database

## Advanced Security and Customization

---

Azure DevOps Security Concepts

Team Foundation Security for Users and Groups

Viewing Azure DevOps User/Group Permissions

Changing Azure DevOps User/Group Permissions

Managing Teams through Azure DevOps Customization

Using Azure DevOps with SSL

## Case Study

---

Existing VB.NET Solution Overview

Creating a Team Project and Adding the Solution

Adding Work Items and Supporting Documents

Check-In and Check-In Policy Development

Code Updates: Versioning/Branching/Merging
