

.NET Training: Creating Windows Applications (NFWIN, 4 jours)

Description

The course Creating Windows Applications (.NET Training) is a detailed exploration of .NET Windows forms. The training includes Visual Studio .NET, architecture considerations for Windows Forms & the use of Windows .NET controls. Concepts such as data validation & user navigation, globalization, ADO .NET database access, multi-threaded programming and messaging are discussed in the course. This course is all about developing Windows Forms based applications with Visual Studio .NET

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

The .NET Framework

.NET Framework Versions and Capabilities

The Anatomy of a .NET Application: From Data to GUI

Exploring Assemblies and Namespaces

Why Object Oriented Programming is Critical to your Efforts!

The Visual Studio .NET Environment

The .NET Answer

Debugging

Preparatory Topics

Creating Classes

Inheritance and Polymorphism

Exception Handling

Working with Generics

About Serialization

File IO

Multithreaded Programming

Creating Windows Applications

Common Dialog Boxes

Form Designer

Form Basics

Creating Forms

Basic Controls

Menus

Toolbars and StatusBar

Creating an MDI Application

Creating Windows Controls

Advanced Windows Programming

Making use of Resource Files

About using Multiple Threads

Advanced Windows Controls

Creating Code Only Controls

Creating Images and Graphs

A Note on Game Programming

Database Programming

ADO .NET Overview

Connections

Connected Data: SQL Statements

Connected Data: Stored Procedures

Using Transactions

Using the DataSet Class

Performance Implications

Windows Data Driven Development

Data Binding Overview

Making Objects Bindable

Using Standard Data Bound Controls

Using Advanced Data Bound Controls

Using a Data Binding Context

MEL for Windows

MEL Application Block Overview

Using the Configuration Application Block

Using Data Access Block

Using the Exception Handling Block

Using the Logging Block

Using Validation Block

NHibernate Basics

Overview

The Problem with Hand-Coded Sql

About ORM with NHibernate

NHibernate Namespaces

NHibernate Interfaces

The ISessionFactory

The Session Instances

Identity

NHibernate Application Configuration

Object Mapping

Overview

The Domain Model

Mapping Basics

Mapping Objects

Dealing with Identity

Mapping Types

Mapping: Value Types and Entity Types

Mapping Class Hierarchies

Mapping Associations

Mapping Collections

Mapping and Polymorphism

Deployment

About Application Configuration

Public versus Private DLLs

Exploring Deployment

About ClickOnce Deployment

An MVC Framework for Windows : Demo Only
