

.NET Training: ASP .NET MVC Core and EF Core (NMVCCORE, 4 jours)

Description

The course ASP.NET MVC and Entity Framework Core studies every aspect of an ASP .MVC Core based web application and API. Starting the Design Pattern, the training discusses the use of Models, ViewModels, Views and Controllers using the pluggable Core architecture. Participants are trained in the development of EF Data Models and explore the use of the ViewModel to Model to Controller relationship in implementing enterprise web applications and APIs. Inversion of Control, logging, validation, exception handling and configuration and deployment are also discussed.
