

C++ Training: Objective-C Programming (OBJECTC, 4 jours)

Description

The course Objective-C Programming (C++ Training) teaches you about Objective-C programming for Apple IOS devices. The training includes programming basics such as environment setup, variables, data types, control structures, functions & structure. The course also covers object oriented programming with Objective-C including classes, inheritance, polymorphism, interfaces & abstract classes to name a few. Our Objective-C training experience concludes with an exploration of controls and the MVC design pattern including views, models & controllers.

Setup

Acquiring Xcode

Installing Xcode

C Basics Overview

C Code Formatting

Variables

Functions

Scope

Conditionals

C Memory and Pointers

Arrays

Loops

Multidimensional Arrays

Pointers

Dynamic Memory

Objects

Structures and Classes

Accessors

Inheritance

Composition

Objects Lifetime

Working with Built-in Classes

Objective-C Basics

NSStrings

Methods

Accessors

Memory Management

Implementing Classes

Class Properties

Objective-C Advanced

Class Protocols

Dynamic Messaging

Working with Exceptions

Introspection

Core Value Classes

NSNumber

NSData

NSArray

NSDictionary

NSDate

NSSet

NSValue

Working with Controls

Windows and Views

Targets and Actions

Responder Chains

Outlets

Data Sources

Binding Data Sources

Objective-C MVC
