

# Web Development Training: Advanced Perl Programming (PERLA, 4 jours)

---

## Description

The course Advanced Perl Programming (Web Development Training) teaches you to write powerful & flexible Perl scripts. The training includes modules, references, advanced regular expressions & text manipulation to name a few. The course also covers network programming & database access with Perl.

## Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

## Plan de cours

### Introduction

---

Perl Benefits and Drawbacks

The Perl Environment

The Perl Lifecycle

The PERL Application Structure

About Scope, Packages and Modules

Running Perl Code

Debugging Perl Code

Accessing Documentation and Help

### Using and Importing Modules

---

The Standard Distribution

Using Modules

Functional Interfaces

Selecting What to Import

Object-Oriented Interfaces

The Comprehensive Perl Archive Network

Installing Modules from CPAN

Setting the Path

### Lists and Arrays

---

Accessing the Elements of an Array

Special Array Indices

List Literals

List Assignment

Interpolating Arrays into Strings

The foreach Control Structure

Scalar and List Context

<STDIN> in List Context

### Working with Subroutines

---

Defining a Subroutine

Invoking a Subroutine

Return Values

Arguments

Private Variables in Subroutines

Variable-Length Parameter Lists

About Lexical (my) Variables

The use strict Pragma

The return Operator

Non-scalar Return Values

Persistent, Private Variables

## Input and Output

---

Input from Standard Input

Input from the Diamond Operator

The Invocation Arguments

Output to Standard Output

Formatted Output with printf

Filehandles

Opening a Filehandle

Fatal Errors with die

Using Filehandles

Reopening a Standard Filehandle

Output with say

## Hashes

---

What Is a Hash?

Hash Element Access

Hash Functions

Typical Use of a Hash

The %ENV hash

## Working with Regular Expressions

---

What Are Regular Expressions?

A Simple Example

Understanding Character Classes

Matches with m//

Option Modifiers

Working with Anchors

The Binding Operator, =~

Interpolating into Patterns

The Match Variables

General Quantifiers

Precedence

## Processing Text

---

Substitutions with s///

The split Operator

The join Function

m// in List Context

Regular Expressions

Processing Text with sed

Processing Text with awk

## Input and Output with File Handles

---

File IO Overview

About IO Operations and the Filehandles Data Type

Manipulating Directories

Opening a File

Reading File Data

Writing to a File

Dealing with Complex Data Structures

Performance Considerations

## Process Management

---

The system Function

The exec Function

Environment Variables

Using Backquotes to Capture Output

Processes as Filehandles

Using Fork

Sending and Receiving Signals

## Introduction to References

---

Performing the Same Task on Many Arrays

Taking a Reference to an Array

Dereferencing the Array Reference

Modifying the Array

Nested Data Structures

Simplifying Nested Element References with Arrows

References to Hashes

About File-handle References

About Subroutine References

## Introducing OO Programming with PERL

---

What is an Object?

Using Objects in Perl

Creating Classes

Creating Properties

Creating Methods

About Constructors

About Destructors

## Network Programming with PERL

---

Network Programming Fundamentals

Installing the Right Modules

Making a Connection

Working with IO::File, IO::Handle, and IO::Socket

Working with Sockets

Working with Net::Ftp, Net::Telnet, Net::SMTP

Working with LWP

Working with HTML::Parser

## Database Programming

---

Database Programming Overview

Understanding Handles

Connecting to the Database

Creating a SQL Query

Reading the Results

Updating the Database

About Transaction Management

About Error Checking in DBI

Using Parameterized Statements

Statement Handle Attributes

Other Handle Attributes

Working with BLOBs and LONGs
