

PLSQL Training: PLSQL Deep Dive (PLSQLADV, 4 jours)

Description

The course PLSQL Training: PLSQL Deep Dive for Operations will have you explore practical PLSQL for every day operations. The course starts with a quick review of Oracle database architecture and table structure for normalization. What follows is a truly exhaustive study of SQL syntax, indexes, aggregate data, and everything that you ever wanted to know about both regular and correlated sub-queries. The course ends with good old-fashioned PLSQL programming starting with the core language and ending with procedures and functions. If you want to learn how to write practical PLSQL, this is the PLSQL training course that you need.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Oracle Databases and Tables

Overview of Oracle Database Architecture
About Database Tables and Data Normalization
About Domain Integrity
About Entity Integrity
About Referential Integrity
A Note on Performance

Structured Query Language (SQL) Basics

Understanding the Structure of Relational Data
Retrieving Data
Adding Table Records
Modifying Data
Deleting Data
The SQL Language: Working with Dates
The SQL Language: Working with NULL

Introduction to Indexing

Overview of Indexes: Ensuring Performance
Using Indexes the Correct Way: OLAP vs OLTP Servers
Creating and Maintaining Indexes
About Point and Range Queries
Choosing Indexes
Putting it All Together

Working with Aggregate Data

Aggregate Data: Essential Concepts
Working with Multiple Levels
Performance Considerations
CUBE and ROLLUP
Building crosstab reports
Utilizing the PIVOT operator in Oracle 11g
RANK and DENSE_RANK
Partitioning in multiple levels

Advanced SQL Querying

Multiple-Table Join Strategies

Using Multi-Table Joins

Working with Inner and Outer Joins

Adding filter conditions to OUTER JOINS

Working with CONNECT BY in a Join

Understanding Self Joins

Recursive Self-Joins and CONNECT BY

Working with INTERSECT

Mastering Sub-Queries

About Sub-Queries and Correlated Sub-Queries

Sub-Queries: Structure and Syntax

Working with Point Sub-Queries

Working with Range Sub-Queries

Working with NULL Values

Working with Multi-Row Sub-Queries

Working with Multi-Column Sub-Queries

Sub-Query Performance: Index Considerations

Sub-Queries Part II: Practical Considerations

Breaking up Complex Problem

Factoring Subqueries for Reusability

Applying Recursive Factored Subqueries

Subqueries as Parameters to Functions

Correlated and Non-Correlated Subqueries in Expressions

PL/SQL Language Fundamentals

PL/SQL Programming Basics

Entering PL/SQL Using SQL*Plus

PL/SQL Script Development Basics

PL/SQL Blocks

PL/SQL Data Types

PL/SQL Variables

Controlling PL/SQL Program Flow

PL/SQL Procedures and Functions

Overview

Creating Procedures and Functions

Simple Stored Procedures

Stored Procedures with Parameters

Working with Arrays and Collections

Working with Objects

Creating PL/SQL Packages
