Server 2022 Training: Introduction to PowerShell (PSHELLI, 2 jours)

Description

The course Introduction to PowerShell (Server 2019 Training) provides participants with a cursory introduction to PowerShell scripting. Starting with the essential elements of the language (variables and other programming structures), the course quickly moves through those base elements to focus on practical examples of the use of PowerShell for administration and automation purposes. If you are an IT professional who wants to learn how to use PowerShell, this SETC certified course will provide you with the introduction that you need.
