

Server 2022 Training: SCOM: Creating Management Packs (SCOMMP, 4 jours)

Description

The course SCOM: Creating Management Packs (Server 2019 Training) teaches you how to create management packs for SCOM. The training begins with a detailed discussion of management pack architecture and files. We discuss tools & components that are used to author a management pack including the authoring console, Visio MP and Visual Studio .NET. The course covers the development of .NET Application monitoring, TCP/IP, WMI, Windows services & events and LINUX management packs. The training concludes with a discussions of event monitors, performance monitors, rules and tasks.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

SCOM Authoring Concepts

About SCOM: Topology, Architecture and Components
About using SCOM2012 Features: Overrides, Monitors and Rules
Tools for SCOM2012 Management Pack Authoring
Understanding the Management Pack Structure
Understanding Component Files in Sealed Management Packs
How to Seal a Management Pack File
How to Work with Management Pack Files

Creating Management Packs

XML Basics: Elements, Attributes and Namespaces
Setting up the Development Environment
Understanding the Tools
Creating a Management Pack using XML
Creating a Management Pack using the SCOM Authoring Console
Creating a Management Pack using Visio MP Designer
Creating a Management Pack using VSAE.

Working with Targets and Object

About Classes and Objects
How to Choose a Target
How to Create a New Target
Working with Attributes
How to Create a Management Pack Template
Understanding and Working with Watcher Nodes

Working with the .NET Application Performance Monitoring Template

Overview of .NET Application Monitoring
How to Configure Monitoring for .NET Applications
How to Add, Enable, and Disable Namespaces
How to Add, Edit, and Remove Methods
How to Add, Edit, and Remove Exception Tracking
Using Exception Handlers to Define Critical Exceptions
Client-Side Monitoring with Targeted Groups and Load Balancers

How to Configure IP Address Exclusion Filters for Client-Side Monitoring

How to Start Monitoring a New Application

Authoring Strategies for .NET Application Monitoring

Application Monitoring Using the Default Settings

Monitoring SharePoint Applications in System Center 2012 SP1

Working with Other Templates

OLE DB Data Source Template

Process Monitoring Template

TCP Port Template

UNIX or Linux Log File

UNIX or Linux Process

Web Application Availability Monitoring Template

Windows Service Template

Working with Event Monitors and Rules

Working with Data Sources

Working with Expressions

Working with Alerts

Windows Events

Text Logs

WMI Events

Syslog Events

SNMP Events

Overview of Event Monitor Logic

About Repeating Events

About Correlated Events

About Missing Events

Correlated Missing Events

Event Monitor Reset

UNIX/Linux Shell Command Alerts

Working with Performance Monitors and Rules

About Performance Monitors

Windows Performance Collection Rules

WMI Performance

UNIX/Linux Shell Command Performance Collection Rules

Script Monitors and Rules

Script Collection Rules

Script Monitors

UNIX/Linux Shell Command Monitors

Dependency Monitors

Aggregate Monitors

Diagnostics and Recoveries

Working with Tasks

Console Tasks

Agent Tasks

Advanced Management Pack Authoring (If Time Permits)

Participants will be shown how to create an advanced MP using custom code and Visual Studio AE.
