

Oracle Training: SQL Data Analysis with Toad Intermediate (SQLTO, 4 jours)

Description

The course SQL Data Analysis with Toad Intermediate (Oracle Training) explores the SQL language with Oracle and Toad. The training includes SQL basics including filtering, sorting, single and multi table join strategies, subqueries, correlated subqueries & more. The course also covers stored procedures and discusses common SQL tasks in an Oracle environment.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Working with Toad

- Overview of the Toad Environment
- Organizing File with Toad
- Writing Scripts with Toad
- Debugging Scripts with Toad
- Exploring Toad's Functional Capabilities
- Configuring Toad to Work for You

Relational Database Essentials

- Relational Database Concepts » Tables, Fields and Rows
- Understanding Data Normalization
- About Entity Integrity: Primary Keys
- About Referential Integrity: Foreign Keys
- About Domain Integrity: Checks and Defaults
- Overview of Oracle Data Storage Structures and Performance Implications

Mastering the Data Retrieval: The Basics

- The Basic Structure
- About Statement Processing
- Working with Aliases and Headers
- Writing Where Statements
- Performing Pattern Matching
- Querying for Ranges
- Writing Predicates for Specific Data Types
- Sorting Data
- Retrieving Unique Values
- Making use of Union

Mastering Data Retrieval: Working with Multiple Tables

- The Anatomy of the Statement
- Working with Point and Range Queries
- Writing Multi-Table Statements: Exploring Joins
- Exploring Join Types: Inner Outer and Cross
- Optimizing Joins
- Using Regular Sub-Queries
- Using Correlated Sub-Queries

Comparing Performance Profiles

Mastering Aggregate Calculations

The Anatomy of Aggregate Value Statements

Exploring Group By

Exploring Oracle Aggregate Functions

Dealing with Multiple Tables

Modifying Data

Working with New Data

Working with Data Modification

Working with Data Suppression

Working with Multiple Records

Performing Bulk Operations

SQL Common Tasks

Working with Automatic Increments

Working with Strings

Working with Dates and Time

Working with NULL Values

Working with Numeric Data Types

Advanced Tasks

Identifying Duplicate Values

Generating Rank

Generating Median

Generating Running Totals

Generating Percent To Total

Generating Cumulative Percent To Total

Creating Stored Procedures

The Performance Advantages of Stored Procedures

Creating Stored Procedures

Working with Input Parameters

PLSQL Programming Essentials

Storing Stored Procedures

Putting it All Together
