

Testing Training: The Complete Lifecycle (TQCOMP, 4 jours)

Description

The course A Complete Course (Testing & Quality Assurance Training) focuses on industry best practices in software testing & quality assurance. The training includes testing & bug types, functional requirements, test plans & test cases and test plan development to name a few. The course also covers test automation, test driven development & quality assurance.

Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

Plan de cours

Fundamentals of Testing Part I

Testing: Roles and Responsibilities

Testing Axioms

Terms and Definitions

Types of Testing: Unit, Regression, User Acceptance, Usability, etc..

A Looming Security Threat: The User

Bugs and Defects

History of Bugs: Infamous Software Disasters

Types of Defects

What is a Bug?

Common Software Errors

Documenting and Reporting Bugs

Gathering Information

Information Gathering Techniques

Interviews and Focus Groups

Questionnaires

Decision Tables

Condition Response Tables

JAD Sessions

System Requirements

About Analysis and Use Cases

About Actors

Finding Actors

Documenting Actors

Finding Use Cases

Documenting Use Cases: Short Form versus Fully Dressed Use Cases

UML Use Case Diagrams: A Useful Communication Tool

The Supplemental Specification

Requirements Based Testing

Dealing with Large Systems

Implementing a Change Management Process

Fundamentals of Testing Part II

Black Box versus White Box Testing

Static versus Dynamic Testing

Testing the Specifications

Testing Functions Testing Data

Test-to-pass/Test-to-fail

Systems Development Lifecycle (SDLC)

Waterfall versus Iterative Methodology

Waterfall Methodologies

Iterative Methodologies: RUP and MSF

Phase Specific Responsibilities of the Testing Group

Testing Types

Overview

Objectives limits of testing

Functional Testing versus Regression Testing

Configuration/Compatibility Testing

Testing Multi-Lingual Systems

Usability Testing

Web site Testing

COTS Testing

Testing for Security

Overview

Threat Modeling

Buffer Overruns

Computer Forensics

Quality Assurance

Responsibilities of the QA Group

Expectation/Deliverables from QA

Major Milestones in QA

Implementing Quality Control

QA and Standards

Test Cases

What is a Test Case? What is a Test Plan

Characteristics of a Good Test Case

Test Case Design

Test Plans

Writing effective Test Cases Validating Test Cases

Review, Inspections and Documentation

Testing Review:

Writing Testing Documents

The Master Test Plan

Test Metrics

Test Coverage

Conducting Walkthroughs and Reviews

Automation Tools

Automation Tools

Overview of Test Case Management Tools

Overview of Defect Tracking Tools

Software Configuration Management Tools

Manual Vs Automated Testing: Why not everything can be automated.

Importance of Automation
