

# Linux Training: The Complete Shell Scripting Course (UNXSHELL, 4 jours)

---

## Description

The course The Complete Shell Scripting Course (Linux Training) is an exploration of shell scripting in Linux. The course provides an overview of the benefits of using shell scripts starting with the basics and moving to command structure, operators, scalars, flow control, sub-routines, collections and lists. The training includes all the skills that you need to automate just about any aspect of Linux.

## Tarifs

- Tarification: \$3,750/person
- Rabais de 10% lorsque vous inscrivez 3 personnes.

## Plan de cours

### Getting Started

---

The Need for a Shell

Running Shell Scripts

Debugging Shell Scripts

Available Shells

About Csh

About Bash : Bourne Shell

About Kornshell

About Zsh

About Tcsh

Choosing the Right Shell

Obtaining Help with Man Pages

### Text Editing

---

Linux Text Editors

The Pico Editor

The Nedit Editor

The Emacs Text Editor

The Vi Text Editor Family

### The Vi Editor

---

What Is Vi

Review of Vi Commands

Vi Buffering

Command Mode and Insert Mode

Moving the Cursor Around

Inserting Text

Deleting a Character Or Line

Undo Last Command

Opening a New Line

Save Your Work Or Abort the Session

### More Editing with Vi – If Time Permits

---

Scrolling the Buffer

The Join Command

The File Command - :f

Edit File Command - :e

Cut and Paste Between Files

Read File Command - :r

Set Options Command

Set Options Command - .exrc File

Cursor Motion Commands - W,w,b,b,e,e

Cursor Motion Commands - \$,^,O,g

Cursor Motion Commands - F,t,f,t

Delete Operator - D

Change Operator - C

Yank Operator - Y

Put Commands - P,p

Searching for a Pattern - /,n,n

Using the Shell

---

The Command Line

Standard Input, Standard Output and Error

Using Default Standard In and Output

I/o Redirection

I/o Redirection - Examples

I/o Redirection - Warning

Appending Output of a File

Pipes

The Tee Utility

Filename Generation

---

Filename Generation

The ? Special Character

The \* Special Character

The [ ] Special Characters

The ! Special Character

Processes

---

What Is a Process

Process Structure

The Ps Utility

Options To the Ps Utility

Background Commands

Killing Background Processes

Redirecting the Standard Error

Shell Programming Concepts

---

What Is a Shell

Which Shell

What Is a Shell Script

Why Use Shell Scripts

Flow Control

---

The Exit Status of Commands

Command Line Examples

The Test Command

The If-then-else Construct

The Elif Construct

A Loop Example

Variables

---

User Created Variables

The Read Command

The Shell Environment

The Export Command

Subshells

Command Substitution

Quoting Mechanisms

Assigning Variables Summary

Special Variables

---

- Number of Arguments

The Shift Command

- All Arguments

- Pid of Shell

More Flow Control

---

The for Loop

The While Loop

The Case Construct

Common Unix Filters

---

Editing the Output of Commands with the Stream Editor Sed

Translating Characters with Tr

Sorting Files and Command Output

Comparing Different Versions of Files

Using Other Common Filters: Cut, Uniq & Tee

Combining Filters for Complex Text Processing

Executing Filter Commands with Find

Restructuring Data with Awk

---

Testing and Extracting Fields From Structured Input

Searching Files with Multiline Records

Performing Arithmetic Calculations

Writing Useful Awk One-liners

Matching Patterns with Extended Regular Expressions

Modifying Awk Default Behaviors

Calling Awk Built-in Functions

Using Awk Control Constructs for Testing and Looping

Storing Data in Arrays

Formatting Output Using Printf
